

Ecology Test Review

Across

1. it has the ability to thrive and spread aggressively outside its natural range
3. all the interacting populations in a given area
4. transfer of energy through a series of repeated stages
6. living with another organism in close association
7. an organisms role in the community
10. all living organisms in their physical & chemical environment
14. the differences in living things in an ecosystem
15. all members of a species inhabiting a given location
16. feeding position along a food chain
17. living things
19. the cannot synthesize their own food & are dependent on other organisms for food
20. the zone around Earth where life can exist

Down

2. development of plant communities
5. any factor that restricts the size of a population
8. both organisms benefit
9. they can synthesize their own food from inorganic compounds
11. the maximum population of a species in an ecosystem
12. a place where a specific species lives
13. nonliving, physical and chemical parts of the ecosystem
18. 1 organism benefits, the other is unharmed
